

VReg-12C · Compliance Documentation

Rev 1.0 · Generated 2026-02-20

Compliance Program Status

This memo summarizes the VReg-12C compliance program as of the issue date. Supersedes prior supplier-quality letters Q-2025-187 and Q-2026-012.

MicroCo maintains an AS9100D-aligned quality management system covering the VReg-12C IC design, fabrication, and qualification flow. The supplier-quality program is independently audited annually; the most recent audit (2026-01-22) closed without findings.

All VReg-12C lots issued under Rev 1.2 of the datasheet have been qualified to MIL-STD-883 Class B requirements. Test reports are archived per QMS procedure QP-014 with retention through 2046.

Export-control classification (ITAR Category XV, §121.1) was verified against the VReg-12C BOM and design files by an independent export-control review on 2026-02-18. The review report is available on request to authorized parties.

Radiation-effects program: Total Ionizing Dose (TID) qualification was performed per MIL-STD-883 Method 1019 in Q4 2025. Single-Event Effects (SEE) characterization is in progress and will be issued as a supplementary report under document number TR-VReg-SEE-001.

Supplier of record: MicroCo Semiconductor Division, San Jose, CA. CAGE Code 8H247. Authorized point of contact: VReg compliance program lead, available via the MicroCo customer portal.
