

PRM-3A IC Qualification Report

Placeholder document — generated for prototype demo

Bench characterization and radiation qualification report for the PRM-3A IC. Includes thermal cycling (-55C to +125C), TID exposure to 75 krad(Si), and full electrical re-test post-environmental.

This is a placeholder document generated for prototype demo purposes. A real qualification report would include detailed test setups, raw data tables, statistical analyses, and test-article serialization.
