

Thermal & Power Performance

Steady-state thermal and power-loss measurements taken at the rated operating point. Results expressed as the worst-case across the test cohort.

Thermal Performance

Thermal dissipation (rated load): **< 2W at rated current**

Radiation Qualification

Total Ionizing Dose (TID) qualification was conducted per MIL-STD-883 Method 1019. Test articles were exposed in cumulative steps with electrical re-test between exposures.

TID Results

Radiation tolerance (TID):

TID > 100 krad(Si)
